2015

Articulate Lawn Sprinklers

irrigation &
nightscape lighting

As we are preparing for the 2015 season and spring is around the corner, we would like to announce our latest updates.

Please look for our **NEW WEBSITE** at **www.articulatesprinklers.com**. Highlighted are all of our services and products. As Peterborough is preparing for water meters, we would like to bring your attention to water conservation and water efficiency usages for your systems.

Water Conservation Tests

This service consists of reviewing and evaluating your irrigation system. We will give you a report on your total water usage per cycle, evaluate your existing water pressure and make suggestions and recommendations on how to run your system more efficiently in order to cut down on your water cost.

Depending on the size of your system, this usually takes 2 hours or less to run through every cycle. This can save up to 30% or more in your irrigation water consumption.

Call us to book this test.

Automatic Fertilization System

The EZ-Flow fertigation system is attached to your existing irrigation system. Every time your irrigation system comes on this little unit will add regulated amounts of natural fertilizer to your lawns, gardens and landscapes beds.

Nightscape Lighting Systems

Let Articulate brighten up your home or cottage with Unique Landscape Night lighting. We will help you design and showcase your home, your pool, your gardens and your outdoor living space with our top of the line path lights, step lights and wall sconces. Our products have a 15 year warranty and are made of solid brass or copper with energy saving led lamps.
